Abstract

Searching for the economic status like automobile sale &GDP(Gross domestic product) and estate price index will have an important meaning year by year whose indicator can exhibit the entire changing tendency and potential prediction further more. So they must be paid more attention for the sake of positively promoting our society burden &liability where the high talents like post-doctoral fellow can take charge of their responsibilities since the capability of them will be able to complete highly technology commercialization urgently. Because the conflict between regional countries and poverty happening in our surround we should take our charges into the actuality virtually to pay those minds in order to protect ourselves' right and benefit. On the other side the estate status can reflect the economy goodness and badness so we should have the strategy eye-light to analyse and judge correctly where the big policy will be judged in advance so as to earn our honor even commission from helping other ones with continuing efforts sustainably. Thereby the qualified senior researchers should grasp certain knowledge &experiences fluently and proficiently in order to proceed his sophisticated mathematical model to resolve his probably meeting problem rapidly where his capability and proficiency can wield into limitation. As to new emerging science field they may progress resolving causality genius' level &ability whilst the performance may prove to be correct and precise with a little deviation. So those high-technique may promote the economy innovation and development like AI(artificial intelligence) stocks diagnosis tool which may proceed decision with saving much time besides the analytic stocks function. Can we be judging it and using together? The answer has been negative obviously since it can not substitute human experts into that tool besides that it may be a machine not human who could not be responsible for our behavior due to being confident it. At last, the Asian ones are currently affording a strong potential in the world economy situation so we must consider about its development reason and forecasting future status in advance, which needs us to support and cooperate them largely and sustainably.

Keywords: research; economy's prosperity; GDP; PhD; AI Robotic; post-doctoral researcher; sustainably

1. Introduction

The economic GDP innovation is about to enhance national citizen life levels gradually throughout post-doctor research etc. efforts constantly. Therein the high technology level will eventually enhance continuously so as to achieve our strategic aim regulated by expert with forecast and regulation. Though there have been many difficulties fronting us but the resolving

method and wisdom can be sought certainly by our endeavour so that the innovative founding will be sought continuously and definitely. On the contrast the some eminent post-doctor researchers would develop their genius &capabilities for excellently processing our project transforming into commercialization continuously and with constant wisdom. On the other side, the automobile as an important transportation's tool could affect its important role in remote

control & regulation aspects. It now becomes a necessary family and group one throughout continuing to search now transformed into new energy vehicle to expect making goodness environment and atmosphere to the generations upon less exploiting resource on earth gradually and eventually. [1~5]

At last the estate as a indicator of economy situation will wield its strong role currently. Therein we should emphasize it and treat carefully by government's constitution correlational one. The policy will reflect the world economic situation and tendency to enhance its modernization level and make some to earn those money become rich in advance, thus the others can develop together. We should continue to put some relevant policy publicly upon changing situation sustainably which can encourage society fare, justice, balance in the end for those who make their endeavour and capability up. Especially the fellow of post-doctoral will play their cutting edge knowledge & experience and capability on relevant field like Deep seek president Master Wenfeng Liang graduated from Zhejiang University, information & electronic Engineering department acquiring his Master degree whose rapidness raises will initiate historical first case in light of the latest news recently.

2. Discussions

The China economy has been ongoing a rapidly developed period after experiencing several ten years effort, hereby the emerging industries like AI Robotic etc. will be encouraged in all aspects which may provide us many promise insights and developing space for our fellows and researchers to follow. Moreover, since the many needing talents may be recruited and used in cutting-edge-field in factories around us the education issue will propose by us whose task may be necessary and urgent for our future perspective, thereby the more carefulness and investment can be essential from now on. On the other hand, the government constitution should afford comfortable advantage investment in those relevant industries for the sake of progressing our entire economy thriving and prosperity continually and sustainably. We will discuss the new and initiative aspect according to China economic developed status so as to find the more and bring out the change in future. [6~13]

2.1 The relationship between the economy and academy

The economy and academy will be mutually progressive, so that we must ensure their collaborative and cooperative in the end. Not only academy may affect the regional economy development, but also the regional economy can promote the academy good development as well. So we should not assess the academic importance and neglect the economic role to the academy since there are many equipment, salary and atmosphere factors may influence the academic high-quality-development too. So the government needs to enough acknowledge the investment significance into academy and makes much help to support its normal R & D (Research & development) development. Furthermore, many having PhD and post-doctorate R&D Base experience might be educated

and they could contribute their wisdom and toughness & knowledge to the modern demands in current society continually and sustainably. Moreover they would carry more significant achievement for satisfying modern requirement in time which may provide large contribution. Like many programme exploring Lunar engineering may be processed continuously by our researcher and engineers for the sake of encouraging human being to certify & clarify that planet situation like soil rock & water source. [14~20]

2.2 In 2024 China economy status and government's finance support

China has developed its economy quality and amount with continuity recently where many provincial and city's GDP indicates more than thousand billion RMB amount like Beijing, Shanghai, Chongqing, Shenzhen, Guangzhou etc.. So their provincial GDP amount will be developing fast more than other countries GDP total amount even like Russia, Philippines, Indonesia, Thailand, Malaysia, Taiwan, Singapore, India etc.. On the contrast the financial support will promote high-tech industry development whose role may improve municipality upgrade so as to enhance domestic demand market by regulating and advocating governmental relevant finance policies and capital allocation realizing actually. [1] Enhancing more financial products will afford an important innovation played in that program which provides more new financial support power and activities. On the other hand increasing investment types and industries may enlarge and enhance more opportunities for company or individual to realize their upgrade action whose activity can raise the unemployment work relief and more diversified businesses update. Those capital support may increase citizen and community consumption where the economic development may achieve through programming that policy and decision. [1]

2.3 China stocks market main change currently

The shared stock on April 15, 2025 [Jiuqi Lim] with 300994 applied to two wheels vehicle; [Xinhua dou] with 002264 could apply to electronic business; [Dajin Zhonggong] with 002487 could be used in sea wind-generator; [Jiewei Food] with 603517 may be used in leisure foods; [Lansheng Lim] with 600806 might be used in exhibition business. Additionally, the member stock [Youbang Food] big raised 20% with the low absorption lurking and following the position absolutely. [4] In light of Table 1 the four raising and one declining stocks will exhibit where the [Huamao Logistics], [Lifang Pharmacy] would realize the raising 10.03% & 9.99% occupied the first and second position. On the contrast the [Kelu Electronic] realized declining -3.79% with 805,237 of total market amount.

Table 1. The four stocks raising and one declining on April 16, 2025. [4]

Code	Name	Raising amount, %	Buying price	Total amount
603128	Huamao	10.03	7.24	179,128

	Logistics			
003020	Lifang Pharmacy	9.99	23.01	47,129
600206	Youyan Xincal	7.46	18.86	735,531
301108	Jieya Limited	4.57	30.50	24,383
002121	Kelu Electronic	-3.79	4.31	186,830

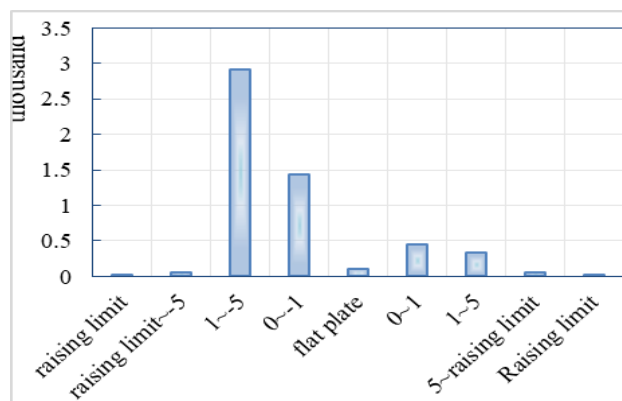

Figure 1. The stocks raising and declining on April 16, 2025. [4]

In light of Figure 1 the situation of stocks recently will exhibit that there were 4,420 ones in both of the two markets declined on April 16, 2025 while there were 30 ones to realize raising limit so the raising and declining rate would 876: 4,519 with sealing rate(when raising limit buying amount ratio current one) to be 54.55%.

2.4 Entirely Individual stocks raising limit on 04-10-2025 & financial change currently

The individual stocks would increase 2,000, 1,700 & 870 ones with 4%, 2% & 7% on April 10, 2025 in light of Figure 2 in China where the total 4,900 stocks raised included 170 ones raising limit and 380 ones falling including 2 ones limited down. That was caused by the U.S. tariff increase policies to abroad countries goods where the more panics were created.

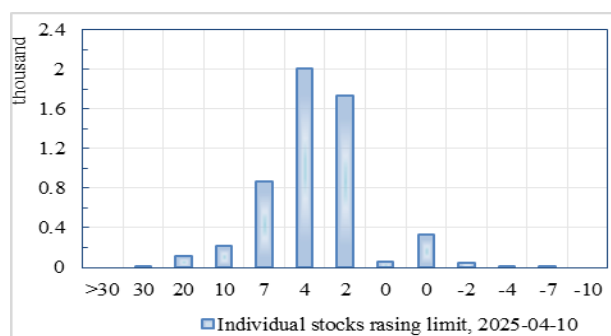

Figure 2 The Individual stocks raising limit within a day. [2]

2.5 Yanshan University, Shenzhen University, China University of Medicine Introduction

Yanshan University which has strong synthesis entity has the most famous like mechanical engineering which named as “mechanical four dragons” besides material science & engineering. Shenzhen University which was erected in 1983 has had 40 years history for building 104 undergraduate majors whose architecture finance electronic information engineering computer science & technique etc. majors would be strong. Moreover, the most potential biology would be outstanding in big platform big item big talent three indicators. [3] The China university of Medicine which locates in Shenyang city has a strong entity special in clinic owned double first school. On the other hand, Zhejiang University of Technology’s Chemical Engineering & Process Applied Chemical etc. field subjects entities are outstanding, the Chemical Engineering & Technology would become a glory. Moreover in the “big platform big project big achievement big talent” four key indicators Zhejiang University of Technology has depended on the Chemical Engineering & Technology and owned “the Green Chemical Synthesis & Transformation Technology country key Laboratory” and acquired “Nature foundation key item(2021)” and “National progressive the First Prize ” besides they have China Academy of Engineering, Academician Congjie Gao.

2.6 Country top 12 foreign trade amount ranking in the first two months of 2025 [5]

The China top 12 foreign trade import-export amounts would express the Kunshan~Taichang indicate 5.4~1.9 trillion yuan while the their ratio attained 2.84 times in the first two months of 2025 in light of Figure 3 respectively. They were occupying the top 1~12 position mentioned counties there. Furthermore, there were two counties whose foreign trade amount exceeded 5.0 trillion yuan for both. They were Kunshan & Jiangyin counties accordingly which occupied the first and second one.

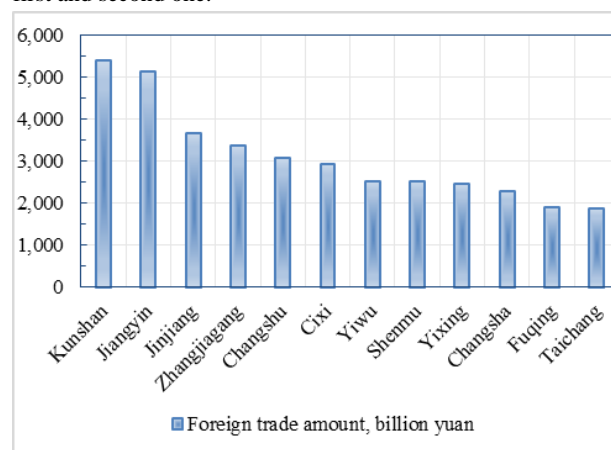

Figure 3 The China strong counties import & export amount ranking in the first two months of 2025

2.7 China top 16~24 counties import & export amount ranking I in the first two months of 2025 [3]

The Chinese top 16~24 will be exhibiting in Table 1 whose ranking as Nanang Liuyang Jiaozhou provided 184.4 180.0 172.8 billion yuan occupied No. 16~18 in light of Tencent News accordingly. Moreover, the foreign trade amount in

those counties would indicate more than 170 billion yuan in general. Therein, the average amount would afford 169.7 billion yuan there whose value was more than 150 billion yuan. The below data in the Table 1 was statistics value upon the General Administration of Customs. [4]

Table 1 The China top 16~24 strong counties import & export amount ranking I in the first two months of 2025

No.	County	Foreign trade amount, billion yuan	Province
16	Nanan	184.4	Fujian
17	Liuyang	180.0	Hunan
18	Jiaozhou	172.8	Shandong
19	Liyang	170.8	Jiangsu
20	Yuyao	168.2	Zhejiang
21	Longkou	164.2	Shandong
22	Rugao	161.5	Jiangsu
23	Zhungeerqi	160.4	Inner-Mongolia
24	Danyang	165.6	Jiangsu
Average	-	169.7	-

3. Conclusions

With regards to thriving the high-tech industrious development like AI robotic, New-energy automotive & aerospace research and expansive fields we should positively and intensively put our attention and capitals into those emerging industrious & business' project by government institution. Thereby, many researcher and senior engineers and much money will be investing for reviving the economic continuously developing with initiating new measures in our searching and manufacture fields of the mentioned development. Moreover, the scientist and fellows processes continuously searching work to help the government and enterprises to make some decisions on the high-tech cutting edge field which may afford a strong future anticipation and prosperity for human being generation continually. Like AI Robotic industry will have a potential prosperity future so we must pay more attention and capitals to its relevant ones, meantime the as many as engineers and scholars would be educated and needed in future.

Currently the Asian ones are affording a strong potential in the world economy situation so we must consider about its development reason and forecasting future status in advance. Firstly, the Asian China & four little dragons even recent four little tigers like Malaysia Indonesia Philippine & Thailand will play an important role in far east area because the advantage geography position like coast sea area so its sea transportation will be developed with the heavy tons freight in the container-ship. Secondly, the many population accumulation will become an important factor which needs a strong developing demands in the competitive environment. At last, the climate

conditions would be a advantageous feature there to proceed more than two times acquirement in one year because of its comfortable atmosphere and earth all the time. On the contrast, the economic development needs more high-level, high-quality fellows to join the collaborative enterprise in unit, research & development department dedicated themselves to the innovation founding and cultivation forwards future emerging one continually and sustainably.
