Abstract

With developing economy the GDP(gross domestic product) will exhibit its strong role in one province even a country which as an indicator of economy development level expressed its effectiveness in all of our economy activities like the income status, foreign export and import trade, infrastructure erection etc. many aspects. So that the fitting increase aim will be becoming an important factor to a country and a region which needs us to consider prudently and make corresponding plan in advance for the sake of progressing our economy promotion urgently and rapidly. Meanwhile, largely investing in high-technique field can make our a series of industrious chain get developed which may employ more relevant talents even experts to participate those high-technique erection and manufacturing behavior, so that it could enhance the employment rate to decline government burden and leisure labor. So we should hear the comment from the scientist and experts who has enough experience to interpret the currently meeting problem divided into the economy and high-tech aspects specially the latter will create many innovation idea and path for our engineers to participate into the projects made by government institution. Overview, the speciality will make speciality creation so those experts can innovate new feasibility for producing many high-tech products continuously and sustainably. The sophisticated product need corresponding skill and experiences so paying so much attention to it will become an important and significant meaning. There the more experts and following engineers will be maintained and educated by the university and manufacturer so supply the qualified engineers would be chosen from a lot of new graduate from college or university. So the human resource and leader could choose from the abroad famous scientist and scholars who proceed the that innovation project fluently and have many years experience after they graduated and acquired MS(master of science) and PhD degree.

Keywords: searching; GDP indicator; publish; behavior & judgement; high-tech product; publishing article; fellows; sustainably

1. Introduction

From the nineteenth to last century the industry reformation can generate with the three industries reformations so that the industry development met the rapidly developing step. There are many technique products formed in makers flowing into modern society which may be convenient relatively to our life quality like AI and Robot etc. innovation products. So we should make sure that the continuously producing those cutting-edge-field ones from university to manufacturer, so that the experimental skill will transfer into the factory for the sake of producing more automatic and wisdom ones who may replace us for proceeding many functional activity rapidly.

Therefore, we need the soul of R &D(research & development) department human resource to make new robot from the mechanical, electric and electronic three aspects which really needs many experts and engineers to wield their wise force to form those automatic robots in final. [1~5]

In the field of pharmacy making, the more molecule would be constructed and apply to experimental trial for the sake of monitoring and evaluating their pharmacology analysis. So that many anti-cancer drugs may be created by us so as to maintain the patients life and cure in final. All those need many doctors and researchers continue to develop new drugs

urgently which may arrange in drug department in medicine and R &D manufacturer in advance through regulating more capital and experts to those business division. Overall, the excellent fellows and scientist could be recruited in time so as to proceed those owning big capital and time works as early as possible. So that to enhance the engineer and experts cooperation within the certain project will be able to help our engineer to complete their task and aim under ensuring the directional correct so as to avoid the wrong method and road. [6~13] As we know the declining the cost will be the starting point as to the new product, and then the human being and materials process will be declined as well specially the latter which is plenty of sophisticated work for us to seek the fitting one and process to complete one with so many engineers and OEM(original equipment manufacturer).

2. Discussions

As for the economy development and energy consumption, the green energy with low carbon contamination will be necessary and important, which can affect the GDP largely in future, so we should analyze the GDP content included how much innovation product are produced and whether those value may progress the future low-coal industry, employed how many talents etc. actual problems. Then the right corrective measure can be erected specially in those most careful problem for the sake of protecting natural from over-population for the next generation. In addition, the employment amount will be enhancing with the high-technique product exhibited in social market more and more. There will be much chance to meet in front of us like seeking fittest expert or engineers who may take good charge of his duty on flow-line entirely. So that guaranteeing the product quality and efficiency will be increasing as well besides they are to plan new blue-diagram for innovation one continuously and sustainably.

2.1 China Doctoral employment rate

The Chinese PhD employment rate would exhibit 45%~5.6% by university, R &D unit~Others accordingly in terms of Figure 1 where the variation attained 8 times maximum in 2015~2020. Meanwhile, the beyond 10% could express R &D unit and Medical & sanitation in addition while national company, private one and others display the 7%~4% following the mentioned three. Those data is come from Perking University<Degree &graduate education> research investigation in addition.

Figure 1 China PhD employment's rate rank. [1]

2.2 Zhejiang province and HK, Macao & Taiwan GDP general amount

The Zhejiang province and Hong Kong, Macao & Taiwan would display 1.23~0.046 trillion dollars by Zhejiang province and Macao city accordingly in 2023 in light of Figure 2 whose variation became above 20 times with maximum value. It could express the large variation between them in contrast and explain the former strong economic community since the latter is only a middle city.

Figure 2 The Zhejiang province, HK, Macao & Taiwan GDP comparison in 2023. [3]

Meanwhile, the Zhejiang province and Hong Kong, Macao & Taiwan would display 1.26~0.05 trillion dollars by Zhejiang province and Macao city accordingly in 2024 in light of Figure 3 whose variation became above 20 times with maximum value while the one between Zhejiang province and Hong Kong would arrive to 3 times. It could express the middle variation between them in contrast and explain the former strong economic community. On the other side, the y-y could become 2.4~4.1% expressed the middle~high development speed with Zhejiang & Macao while the Taiwan & Hong Kong maintained the middle one with about 2.5% for both of them.

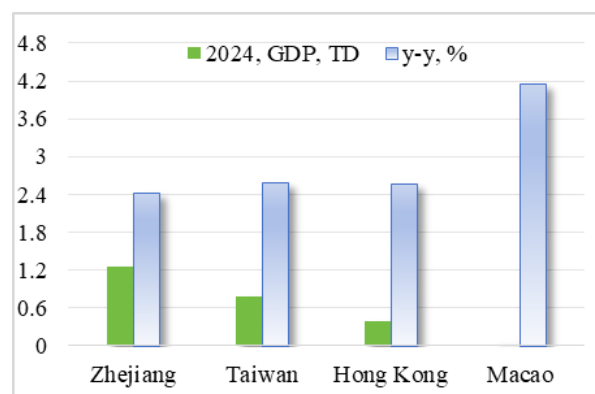

Figure 3 The Zhejiang province, HK, Macao & Taiwan GDP & y-y comparison in 2024. [3]

On the other side, the Zhejiang province and Hong Kong, Macao & Taiwan would display 55~7 billion dollars by

Zhejiang province and Macao city accordingly in 1995 in light of Figure 4 whose variation became above 8 times with maximum value while the one between Taiwan and Zhejiang would arrive to near 5 times. It could express the middle variation between them in contrast and explain the former strong economic community then. On the other side, the y-y could become 325~115% expressed the high-middle development speed with Zhejiang & Macao to exhibited their strong potential power while the Taiwan & Hong Kong maintained the middle one with about 70% ~100% for them.

Figure 4 The Zhejiang province, HK, Macao & Taiwan GDP & y-y comparison in 1990 & 1995. [3]

Additionally, the Zhejiang province and Hong Kong, Macao & Taiwan would display 480~40 billion dollars by Zhejiang province and Macao city accordingly in 2011 in light of Figure 5 whose variation became above 10 times with maximum value while the one between Taiwan and Hong Kong would arrive to near 2 times. It could express the middle variation between them in contrast and explain the former strong economic community then following Taiwan near 500BD GDP. Meanwhile, the y-y could become 49~90% expressed the high-middle development speed with Zhejiang & Macao to exhibited their stronger potential power while the Taiwan & Hong Kong maintained the middle one with about 31% ~22% for them in 2009 & 2011.

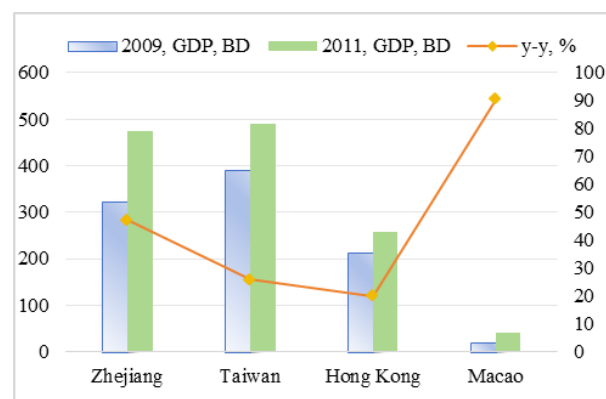

Figure 5 The Zhejiang province, HK, Macao & Taiwan GDP & y-y comparison in 2009 & 2011.

2.3 International Journal of Recent Advances in Multidisciplinary Research

It has following content like. 1. the ISSN: 2350-0743 & Impact Factor 2023: 6.004; 2. the ISI Indexed Journal: 2019-2020 -1.119; 3. the Fast Publication, Scholarly, Online, Peer-reviewed, Multidisciplinary, Interdisciplinary, Monthly, and fully refereed journal; 4. Volume 12, Issue 07, July- 2025. So that we are pleased to inform you that IJRMR is going to **publish nearly next journal**. We would like to invite you to contribute your research paper for publication in IJRMR. The papers published in IJRMR will receive very high publicity and acquire a very high reputation. The journal covers all areas of Agriculture Sciences, Education, Engineering, Humanities, Life Sciences, Health Sciences, Physical Sciences, Social Sciences, Mathematics, Natural Resources, Veterinary Sciences, Management, Computer Science, Information technology, Electronics Engineering, Electrical Engineering, Mechanical Engineering, Civil Engineering, Biotechnology, Applied Sciences, and many more with that one. We publish original research articles, review articles and technical notes. The journal reviews papers within one week of submission and publishes accepted articles on the internet immediately upon receiving the final versions. Our fast reviewing process is our strength. **For the author's convenience, we strongly follow the following steps.** 1. Response will be given within 6 hours; 2. The paper will be reviewed within 5 days; 3. Author will get their Publication within 7 days of submitting the paper; 4. All the accepted papers will be open accessible with full PDF download. [4] We welcome the authors from every regions to publish their cherishable articles to our journal urgently and heartily.

2.4 Jiangsu province cities GDP ranking

The Jiangsu province cities GDP per capita analysis will show 13,800~7,500 dollars by Wuxi~Yangzhou city in 2010 in terms of Figure 5 whose variation attained 1.83 times maximum.[1] The ones above 10,000 dollars may become Suzhou Changzhou Nanjing city additionally to express their strong economy prosperity. Meanwhile the others like Zhenjiang & Yangzhou city remained 10,000~7,000 dollars zone.

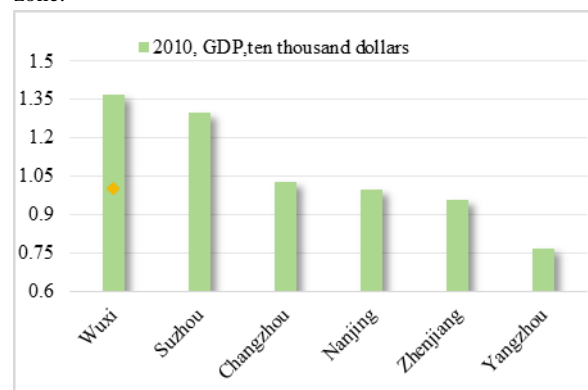

Figure 5 The Jiangsu province cities GDP per capita analysis. [6]

Overview, the doctoral degree-owner and post-doctoral experience will be an expert in his research field so he may process a certain research working in university and R & D

(research & development) department in big manufacturer who may be had a high salary and welfare & bonus definitely so he may focus his attention to the research item completely. We should understand and provide the best welfare for him to accommodate and working environment comfortably for him to search the complicate intrinsic relationship to a certain commodity. Moreover, there will be the staff who operates the experiment process daily in light of making plan strategic diagram and do many communications in a week etc. periodic time know how to complete the aim with a week and longer time.

3. Conclusions

With developing economy the GDP will exhibit its strong role in one province even a country which as an indicator of economy development level expressed its effectiveness in all of our economy activities like the income status, foreign export and import trade, infrastructure erection etc. many aspects. So that the fitting increase aim will be becoming an important factor to a country and a region which needs us to consider prudently and make corresponding plan in advance for the sake of progressing our economy promotion urgently and rapidly. Meanwhile, largely investing in high-technique field can make our a series of industrious chain get developed which may employ more relevant talents even experts to participate those high-technique erection and manufacturing behavior, so that it could enhance the employment rate to decline government burden and leisure labor. So we should hear the comment from the scientist and experts who has enough experience to interpret the currently meeting problem divided into the economy and high-tech aspects specially the latter will create many innovation idea and path for our engineers to participate into the projects made by government institution. Like AI (artificial intelligence) robot as an important high-technique equipment who may process many men-like activities can bring out new reformation in our world. Meanwhile, they would imitate human being to do running, fighting, climb, flip etc. complicated activities which exhibits the top AI skill and level like Uni-Tree Technique. All those focus on the software AI and Body combination, so the launch producing will meet the cost problem ie. Price. U.S. Open AI's robot sells several ten thousand dollars while China Uni-Tree Tech only sells one hundredth.

Conflict of Interest

The authors declared that there were not conflicts of interest to disclose.
